RSI

SOLUTIONS THAT BRING US TOGETHER SERVICE THAT SETS US APART

Founded in 1989, RSI (Refinery Specialties, Inc) is a Texas-based oilfield service company focusing on formulating, manufacturing and providing customized specialty oil and gas chemicals, pump down services, and related integrated services such as remedial pumping, stimulation and hot oiler services.

The RSI Difference

RSI is the Right Choice because we tailor solutions that bring us together and provide service that sets us apart.

At the core of what we do is our experienced, skilled and service-driven staff. We get on site, roll up our sleeves and get to know as thoroughly as you do your operations, pay zone geology, wells and assets.

It starts with our people using proven and effective analysis tools to accurately diagnose your individual wellbore, field and company-wide production challenges. Then, we formulate the most effective treatment and develop, implement and service a customized chemical program that meets your specific needs day in and day out.

Identifying the problem isn't enough to solve it – any effective solution is a combination of crafting the right chemical formulation based on proven science, choosing the most effective application method and then following it up with safe, consistent and reliable delivery and service.

In addition to our rigorous, hands-on approach to analyzing stimulation and/or production characteristics, we deliver all of our offerings in a professional, safe and service-oriented way.

Chemical Products

Protect, Enhance and Restore

We provide a hands-on, consultative approach based on decades of experience in the field, tailored to the specific need of our customers. Whatever your specific challenge is, RSI has experience in helping you overcome it.

We provide chemical solutions for:

- Integrity Management
- Production Optimization
- Flow Assurance

Our chemical solutions combined with our complementary oilfield services give RSI the capability to:

- Enhance production from producing wells
- Protect your assets
- Restore production from older wells
- Provide customized well completion services

The RSI chemical product advantage:

- Committed to QHSE standards for safety first
- Based on proven chemistry and tested in the field, our products are functional and reliable
- Manufactured to the highest quality standards using safe processes
- Close coordination with our services

RSI manufactures and synthesizes chemical solutions based on proven chemistry to produce reliable results. Combined with our essential oilfield services, RSI can be your “go to” oilfield solutions provider.

The RSI Service Advantage

RSI offers oilfield services essential to oil and gas operations. We are there when you need us. Combined with our core chemical solutions, RSI can be your “go to” oilfield solutions provider.

Services that set us apart

- Equipment that is regularly maintained, cleaned and serviced for safe and efficient operation
- Experienced and knowledgeable staff
- Committed to QHSE standards for safety first
- Close coordination with our core chemical business

Services

The RSI Advantage

Remedial Pumping

We operate a fleet of pump down trucks in the Texas, Arkansas and Louisiana markets we serve.

Common applications:

- High-pressure pumping of perforating guns and pressure testing equipment
- Injecting water or treating chemicals into the well as part of a well maintenance or additional completion procedure
- Pressure testing of tubing, casing and flow line
- Temporarily suspending the flow of hydrocarbons and water to permit repair and maintenance operations

Acidizing

We operate a robust fleet of equipment dedicated to your acidizing needs, including twin-pump units, acid pump trucks, treating trucks and acid transports. Our equipment ranges from 500 to 2,000 HP, ensuring we have the right equipment for your job.

Common applications:

- Matrix Acidizing
- Fracture Acidizing
- RSI also custom blends chemical additives required for any acid job (retarders, foamers, non-emulsifiers, corrosion inhibitors, friction reducers, fluid loss additives, surfactants, etc.) and delivers them to the work site.

Stimulation / Hydraulic Fracturing

Our fleet of frac pump trucks continues to grow to meet rising customer demand. Since entering the market in late 2011, we have achieved a growth rate of over 250%.

RSI has the ability to pump all types of fracturing techniques including zipper fracs, slickwater fracs, cross-linked fracs and gelled water fracs.

Hot Oil

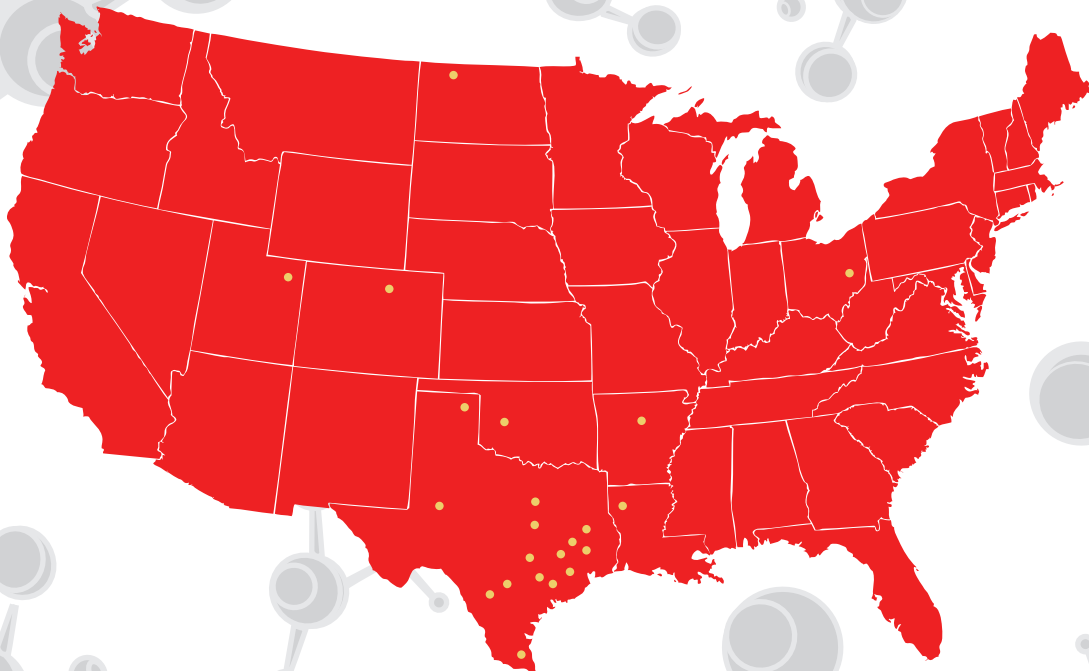

We operate several hot oiler trucks, serving basins throughout Texas. Hot oilers are an integral part of the production process in this market.

Common applications:

- Remove paraffin accumulations from flow lines and surface equipment that would otherwise choke the flow of hydrocarbons
- Heat and circulate surface stock tanks to cause sufficient separation of produced crude oil and water so produced water can be drained and disposed
